Subject: Upcoming Field work at Wilcox Oil Company Superfund Site

Good Day 6 I am sending this email to let you know of our upcoming field work at the site. If this e of communication is not acceptable, please let me know the most appropriate means to speak with you.

During the weeks of September 14 and 21, 2015, we will be out at the site to do some geophysics and minor digging. The geophysics work is a non-invasive technology that is conducted on the land surface to provide information about the subsurface. This technology will allow us to better understand the underlying bedrock, and will also identify any buried structures or utilities that may be in the area. We will also have a small excavator on site to help us verify some of the information we will be getting from the geophysics. We do not anticipate digging any deeper than 5ft deep, and all holes will be backfilled.

Part of the area we are interested in includes the southern portion of your property. I wanted to let you know that we will be out there and provide you with a summary of the work we are doing so that if you have questions or concerns regarding the work you can ask them. You can either send an email with your questions, or give me a call at the number below. We will also be in the area next week, so if you wanted us to meet you on either Thursday or Friday of next week we can do that.

Please let us know if you have any concerns. Thank you for your continued interest in our project.

Katrina Higgins-Coltrain Remedial Project Manager US EPA Region 6 LA/OK/NM Section 1445 Ross Avenue Dallas, Texas 75202 214-665-8143
